*SUPERNOVA 2005bk IN MCG +07-33-27*

R. A. Jansen and K. Tamura, Arizona State University; and N. A. Grogin, Johns Hopkins University, report their discovery of an apparent supernova in *UBVRI* CCD images obtained with the 1.8-m Vatican Advanced Technology Telescope atop Mt. Graham. Jansen first found the conspicuous point-like object at  $R = 17.95 \pm 0.05$  on two 300-s *R*-band images taken on Apr. 2.46 UT, it and was confirmed on images taken by Jansen and Tamura on Apr. 4.4, 5.4, 6.4, and 7.5. The new object is located at  $\alpha = 16^{\text{h}}02^{\text{m}}17^{\text{s}}.04$ ,  $\delta = +42^{\circ}54'55''.3$  (equinox 2000.0), which is  $4''.5$  east and  $5''.6$  south of the center of the nucleus of MCG +07-33-27. Nothing is visible at this location on a Sloan Digital Sky Survey image or on an *R*-band CCD image obtained by Grogin on 1995 May 31.4 with the F. L. Whipple Observatory 1.2-m telescope (limiting mag  $R \simeq 21.3$ ). There is a nearby bright (red mag  $\sim 11$ , blue mag  $\sim 13$ ) foreground star with position end figures  $09^{\text{s}}.94$ ,  $04''.6$ .

*SUPERNOVA 2005bl IN NGC 4059*

Further to *IAUC* 8507, K. Shimasaki and W. Li report the LOSS discovery of an apparent supernova on unfiltered KAIT images taken on Apr. 14.34 (at mag 18.8) and 15.36 UT (mag 18.3). SN 2005bl is located at  $\alpha = 12^{\text{h}}04^{\text{m}}12^{\text{s}}.26$ ,  $\delta = +20^{\circ}24'24''.8$  (equinox 2000.0), which is  $13''.2$  east and  $11''.4$  south of the nucleus of NGC 4059. A KAIT image taken on Mar. 11.33 showed nothing at this position (limiting mag 19.5).

*COMET 9P/TEMPEL*

J. Crovisier, P. Colom, N. Biver, D. Bockelée-Morvan, and A. Lecauchoux, Observatoire de Paris, report: "The OH lines at 18 cm were observed in comet 9P/Tempel (the target of the 'Deep Impact' mission) with the Nançay radio telescope. The average spectrum from Mar. 20 to Apr. 14 shows detection of the 1667-MHz line with an area of  $12 \pm 2$  mJy km/s, corresponding to an OH production rate of  $4 \times 27$  molecules/s."

Visual total-magnitude estimates: Mar. 8.57 UT, 12.7 (S. Yoshida, Ibaraki, Japan, 0.40-m reflector); 11.83, 12.9 (A. Pearce, Noble Falls, W. Australia, 0.20-m reflector); 20.18, 12.6 (N. Biver, Poigny-la-foret, France, 0.26-m reflector); 29.87, 11.8 (A. Baransky, Pylypovychi, Ukraine, 0.36-m reflector); Apr. 4.57, 11.5 (K. Yoshimoto, Yamaguchi, Japan, 0.25-m reflector); 10.86, 11.4 (A. Diepvens, Balen, Belgium, 0.15-m refractor); 12.14, 11.6 (J. J. Gonzalez, León, Spain, 0.20-m reflector).
