COMET 71P/CLARK

This comet has been recovered at total mag $\sim$ 17.5–18 via observations at several observatories during Dec. 22–30, with the astrometry, the following orbital elements by B. G. Marsden (from 78 observations, 2000–2005; mean residual $0''.7$; nongravitational parameters $A_1 = +1.05 \pm 0.19$, $A_2 = -0.7600 \pm 0.1056$), and an ephemeris appearing on *MPEC* 2005-Y59. The correction to the prediction by S. Nakano (*MPC* 48382; *2006 Comet Handbook*) is $\Delta T = -0.42$ day.

COMET C/2005 Y2 (McNAUGHT)

R. H. McNaught reports his discovery of a diffuse comet on CCD survey exposures obtained with the 0.5-m Uppsala Schmidt telescope at Siding Spring (discovery observation tabulated below). Better exposures taken on Dec. 31.44–31.46 UT confirm a coma diameter of $\sim 10''$.

The available astrometry, the following preliminary parabolic orbital elements, and an ephemeris appear on *MPEC* 2006-A01.
