COMET C/2006 G1 (McNAUGHT)

R. H. McNaught reports his discovery of a comet with a coma diameter of $\sim 10''$ on CCD images taken with the 0.5-m Uppsala Schmidt telescope in poor, variable seeing conditions (discovery observation below). Follow-up observations by McNaught on Apr. 6.6–6.7 UT showed a faint, diffuse tail $\sim 8''$ long in p.a. $\sim 300^\circ$.

| 2006 UT | α_{2000} | δ_{2000} | Mag. |
|--------------|---|-----------------|------|
| Apr. 5.69705 | 14 ^h 31 ^m 48 ^s .10 | -42°58'12.3'' | 18.0 |

The available astrometry, the following very preliminary parabolic orbital elements, and an ephemeris appear on *MPEC* 2006-G27. It is likely that this comet is of short period.

$$\left. \begin{array}{l} T = 2006 \text{ Oct. } 10.798 \text{ TT} \\ q = 1.59344 \text{ AU} \end{array} \right\} \begin{array}{l} \omega = 17.146 \\ \Omega = 283.217 \\ i = 20.334 \end{array} \left. \vphantom{\begin{array}{l} T \\ q \end{array}} \right\} 2000.0$$

SUPERNOVAE 2006bm, 2006bn, 2006bo

Three additional apparent supernova have been reported from unfiltered CCD images: 2006bm by T. Puckett and G. Sostero (0.60-m reflector at Ellijay, GA; cf. *IAUC* 8693), 2006bn by L. A. G. Monard (cf. *IAUC* 8697), and 2006bo by T. Boles (cf. *IAUC* 8698).
